

查看控制器状态脚本: /usr/local/ipmi-servd/scripts/check_status

ativce : IMPI控制器运行状态

dead : IMPI控制器停止状态

防火墙操作脚本: /usr/local/ipmi-servd/scripts/firewall_operation

启动防火墙

```
/usr/local/ipmi-servd/scripts/firewall_operation start
```

停止防火墙

```
/usr/local/ipmi-servd/scripts/firewall_operation stop
```

查看防火墙规则

```
/usr/local/ipmi-servd/scripts/firewall_operation list
```

添加防火墙规则, 假如需要放行ip = 192.168.1.1 访问 port = 6543端口, 执行以下命令

```
/usr/local/ipmi-servd/scripts/firewall_operation add 192.168.1.1 6543
```

删除防火墙规则

```
/usr/local/ipmi-servd/scripts/firewall_operation del 192.168.1.1 6543
```
